

## Forté Case Removal

### Tools required:

2mm allen wrench (or Baratza calibration tool), side cutters, #2 Philips screwdriver

\*\*\* Be sure to have a soft work surface like a towel to prevent the polished casing from being scratched\*\*\*

### Procedure:

1. Clear beans out of the hopper and run the unit briefly to clear any leftover beans from between the burrs.
2. UNPLUG GRINDER
3. RAISE BOTH LEVER ARMS ALL THE WAY TO THE TOP
4. Remove the 2mm case screw on the top rear of the casing.

5. Tilt the grinder forward onto its face. Using side cutters, remove the rear two feet (ONLY THE REAR FEET)

6. Remove the Philips self-tapping screws from beneath the rear two feet.

7. Place the grinder right side up and pull the case off from the rear.
