How to: Cone Burr Shim Installation
Sette 30, Sette 270, Sette 270W, Sette 270Wi
Time: 10 min
Difficulty: Easy
Tools/supplies: 5mm hex key (included in grinder shim kit S902)
Parts: Sette Cone Burr Shim (SKU: S904) (included in grinder shim kit)
Additional Resources: n/a

*** Unplug the grinder from power supply ***

We advise only installing one shim at a time to avoid clogs or potential damage. One shim shifts the grind range finer by approximately 6 macro steps. For example, if using 1F before adding a shim, start at 7F after adding a shim.

Close the hopper gate and clear ground coffee from the system
Rotate the macro adjustment assembly in the coarse direction, past 31 until it stops and can be pulled down for removal.

Place the assembly on a work surface. Press down evenly on the metal adjustment assembly to remove the cone burr subassembly.

On separation, the adjustment subassembly will snap free

Pull to remove the nozzle.
Remove the cone burr hex bolt.

Remove the cone burr.

Add 1 shim.

Install the cone burr.

Note that the burr and holder are keyed.

Install the cone burr hex bolt and tighten.

Bolts must insert into burr

Tighten fully
Install the nozzle.

Place the cone burr subassembly upside down on the work surface. Position the adjustment ring and press down evenly to snap the parts together into one assembly.

The parts will make an audible snap sound.

Insert the cone burr holder halfway up into the grinder. Rotate the assembly as needed until the cone burr holder is keyed into the unit.
Line up the blue tab on the adjustment ring with the blue arrow on the case.

Press up on the assembly and rotate the blue tab towards the rear of the grinder.

Install the hopper and return the unit to operation.
