How to: Micro Adjustment Felt Friction Pad Replacement
Sette 270, Sette 270W, Sette 270Wi
Time: 5 min
Difficulty: Easy
Tools/supplies: Phillips #2 Driver
Parts: Micro Adjustment Felt (S582)
Additional Resources: N/A

*** Unplug the grinder from power supply ***
Remove the adjustment assembly.

Remove the 3 Philips screws securing the micro adjustment ring into the assembly.

Remove and discard the current felt, if present.
Starting with one end of the new felt, press it into the groove in the micro adjustment ring.

Work the strip into the groove around the ring until it is all seated.

The felt should protrude slightly from the groove.

Felt protrudes roughly 1mm
Place the Micro Adjustment Ring onto the Macro Adjustment Ring

The interface is keyed. Ensure first that the screen printing on the Micro ring is aligned with the indicator line printed onto the Macro ring. Then, ensure that the screw holes on the Micro ring align with the screw holes on the black interior ring in the Macro assembly.

Secure the 3 Philips screws.
If the micro adjustment is now too tight, remove the micro adjustment ring and press the felt into the groove more firmly.

For more minor modification of friction, the 3 Philips screws can be loosened or tightened slightly.
